Superb Performance in a Compact Body

A Highly Bright Portable with 5,000 lm/4,300 lm[*1]

| VW435N | VW430 | VX505N | VX500 |

The PT-VX505N/VX500 and PT-VW435N/VW430 rank high in the portable projector category with their high brightness of 5,000 lm and 4,300 lm, respectively. All models also incorporate a variable iris that produces a high contrast of 4,000:1/3,500:1.[*1] This all combines to provide brighter, sharper projection for versatile situations.

4,000 lm/3,000 lm[*2] of Brightness in a Compact Body

| VW330 | VX400NT | VX400 | VX41 |

A remarkable 4,000 lm/3,000 lm[*2] of brightness have been achieved in a compact, easy-to-carry body, weighing only 3.6 kg (7.9 lb) or less.[*3] Bright, clear images enhance a variety of viewing situations and applications.

The Daylight View Basic Function Ensures Clear Images Even in Brightly Lit Rooms

| VW435N | VW430 | VX505N | VX500 |

Panasonic's Daylight View Basic technology achieves sharp, easy-to-see images by clearly reproducing the details in dark image areas, which were previously difficult to see in brightly lit rooms. A built-in sensor measures the ambient light, and the Daylight View Basic function adjusts the halftone color and brightness level according to the surrounding illumination.

Long-Lasting Lamps and Air Filters

| VW435N | VW430 | VX505N | VX500 |
| VW330 | VX400NT | VX400 | VX41 |

The PT-VW330/VX400NT/VX400/VX41 have a maximum lamp replacement cycle of 5,000 hours.[*4] The air filters of the PT-VW330/VX400NT/VX400/VX41 also have a replacement cycle of 6,000 hours.[*5] This reduces maintenance hassles for long periods of use, and helps to lower maintenance costs and reduce environmental impact.

Model	Lamp Replacement Cycle[*4]	Air Filter	
		Replacement Cycle[*5]	Types
PT-VW435N/VW430 VX505N/VX500	4,000 hours	4,000 hours	Pleated Micro Cut Filters[*6] (in 2 locations)
PT-VW330/ VX400NT/ VX400/VX41	5,000 hours	6,000 hours	Three-layered Air Filters (in 2 locations)

Quiet 29-dB[*7] Design Does Not Interrupt Meetings or Classes

| VW435N | VW430 | VX505N | VX500 |
| VW330 | VX400NT | VX400 | VX41 |

The quiet design keeps noise levels down to 29 dB,[*7] so the sound of the cooling fan is hardly noticeable. This helps the audience to keep their attention on the speech when someone is giving a presentation or on the screen images during quiet scenes.

Versatile Eco Performance Helps the Environment

Intelligent Lamp Control System Reduces Power Consumption

| VW330 | VX400NT | VX400 | VX41 |

When the lamp power is set to Auto, the intelligent lamp control system automatically adjusts the lamp output in accordance with the brightness of the projected image and reduces it by up to 70 %. It also combines with color shift correction, which corrects the shift in the color balance that occurs when the lamp output drops. As a result, power consumption is effectively reduced while excellent color reproduction is maintained.

Displaying the Total Amount of Reduced Power Consumption and CO₂ Emission

| VW330 | VX400NT | VX400 | VX41 |

When the lamp power is set to Eco1, Eco2 or Auto, you can display the total amount of reduced power consumption and decreased CO_2 emission compared to when the lamp power is set to Normal. It can be shown by day, month or year. Quantitatively checking these reduction amounts helps to increase the awareness of energy saving and the environment.
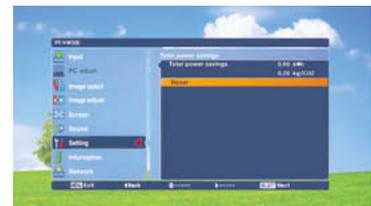

Environmentally Friendly Standby Power Consumption

| VW435N | VW430 | VX505N | VX500 |
| VW330 | VX400NT | VX400 | VX41 |

When the Standby mode is set to Eco, the standby power consumption is up to 0.48 W.[*8] This lowers running costs, and helps to reduce environment impact.

Ecology-Conscious Design

- No halogenated flame retardants are used in the cabinet.
- Non-coated cabinet for easy recycling (For the PT-VW435N/VW430/VX505N/VX500).
- Lead-free glass is used for the lens.
- Lamp power switching further reduces power consumption.
- Standby power consumption of only 0.48 W[*8] has been achieved.
- RoHS compliant

Caution

Do not install the projector in locations that are subject to excessive water, humidity, steam or oily smoke. Doing so may result in fire, malfunction or electric shock.

NOTE ON USE

1 The projector uses a high-voltage mercury lamp under high internal pressure. This lamp may break, emitting a popping sound, or fail to illuminate, due to impact or extended use.
2 The high-wattage lamp becomes very hot during operation. Please observe the following precautions:
- Never place objects on top of the projector while it is in operation.
- Make sure there is an unobstructed space of 1,000 mm (39-3/8 in) or more around the projector's exhaust openings.
- If stacking projector units, care must be taken to provide the recommended space between units. These space requirements also apply to installation where only one projector unit is operating at one time and the other unit is used as a backup.

- If the projector is placed in a box or enclosure, the temperature of the air surrounding the projector must match the operating temperature listed in the specifications table during use. Also, make sure the projector's intake and exhaust openings are not blocked. Ensure there is sufficient ventilation to prevent hot air from the exhaust openings being recirculated into the intake opening.
3 The lamp replacement cycle duration becomes shorter if the projector is operated repeatedly for short periods.
- The lamp replacement cycle varies greatly depending on individual lamp characteristics and usage conditions.
- The brightness of the lamp will gradually decrease with use.
4 Due to natural characteristics of lamps, screen brightness may fluctuate. This is not an indication of faulty lamp performance.
